

# NELSON RIVAS

## .NET Software Developer

### About me

.NET Software Developer with over 4 years of experience working remotely. I have experience in a variety of technologies, including C#, .NET Core, SQL Server, JavaScript, ReactJS, HTML, CSS. I have contributed to the full-stack development of web applications, from writing and refactoring code to troubleshooting technical issues. I am also able to work with third-party APIs and collaborate in design and architecture meetings to provide effective solutions. Additionally, I have skills in web application optimization.

### Skills

#### Languages

- English (intermediate: B2)
- Spanish (native)

#### Soft

- Proactive
- Responsible
- Empathy
- Leadership
- Resilient
- Honesty

#### Technicals

- C#/.NET Core
- Azure Cloud
- SQL (MySQL, PostgreSQL, MSSQL)
- XUnit
- Entity Framework
- ReactJS
- JavaScript
- NoSQL (MongoDB)
- APIs Restful
- Graph API
- Git/Github
- TypeScript
- TailwindCSS
- Bootstrap
- JQuery
- Google Apps Script

### Certifications

AZ-900 Fundamentals

### Education

#### Universidad Central de Venezuela

- Currently working on my thesis for my Bachelor's degree in Computer Science.

### Experience

#### React developer

mayo 2022 - octubre 2022

SOAINT, Panamá

- I developed the interface of an internal application for Banesco Panamá, improving the commercial credit granting processes.
- Automated and optimized processes, reducing approval times and streamlining operations.
- I collaborated with the UX/UI team to design an intuitive user experience, which increased user adoption and satisfaction.

#### Fullstack developer

2021 - 2022

DiegoNoriega.co, Argentina

- Development of a Google Apps add-on: In this project, I had the opportunity to develop an add-on that processes forms and generates reports in Google Cloud services, which significantly improved the company's data analysis process.
- Generation of performance reports on LinkedIn: Using technologies such as .NET Core, JQuery, and Bootstrap, I developed an application that allows a diagnosis based on a series of questions and generates reports about the performance of a LinkedIn account, which allowed customers to have a better understanding of their performance on this social network.
- Development of a platform for cognitive health professionals: Through the use of technologies such as .NET Core, JQuery, and Bootstrap, this project allowed the company to offer a personalized and high-quality solution to its clients.

#### Fullstack developer

2020 - 2022

amoGrowth, Argentina

- Led the development of a MERN (MongoDB, ExpressJS, ReactJS, NodeJS) application that linked social media accounts with WordPress, centralizing information to improve the blog's positioning.
- Guaranteed the scalability of the system to handle large volumes of data and ensure high performance during peak demand times.
- Developed a modern and functional interface with React and Bootstrap, offering an intuitive and user-friendly experience.

#### Fullstack developer

2019 - 2020

Ernst & Young (Centroamérica)

I have developed an integrated tool for file management and internal report generation for a leading financial institution in Costa Rica. I used advanced technologies such as .NET and ReactJS to ensure a robust and high-performance system that met the client's specific needs.

- I Collaborated with a multi-functional team in feedback sessions to ensure smooth communication and successful project delivery, meeting the established deadlines.

#### Backend developer

2018 - 2019

ControlRoll, Chile

- I developed an HR time tracking tool using technologies such as JQuery, Bootstrap, and .NET, optimizing internal monitoring and analysis.
- I implemented data analysis and reporting features, resulting in a significant reduction in operating costs.
- I improved the user experience by incorporating modern technologies, leading to an increase in end-user satisfaction.
